1: The pond

Can you guess who lives in this complex habitat?
2: Starting place

Sunlight, water, mud, and air provide the building blocks for plantlife - the producer species.
3: First web threads

The pond plants provide food for many creatures - the herbivores.
In the food web many animals interact, consuming plants or other animals.
5: Energy movement

Throughout the web, small insects and fish provide food for larger creatures.
Nearby animals

Omnivores and carnivores from various parts of the web also depend on pond life.
7: Our connection

People also eat plants and animals from the pond!
8: Full circle

Plant & animal detritus is eaten by creatures living in pond mud nourishing future growth.
