

## **New Mexico Deer Harvest Survey Report for the 2008-2009 Season**

New Mexico Department of Game and Fish  
Federal Aid in Wildlife Restoration  
Grant W-93-R-50

Prepared by Barry Hale

The 2008-2009 harvest survey was the third year with the Mandatory Hunter Harvest Reporting System Program (Reporting Program). The Reporting Program was implemented in 2006-2007 in attempt to substantially increase the hunter-harvest survey response rate and thereby improve the overall accuracy of the harvest data. This Reporting Program required all hunters obtaining deer permits to report their hunting effort and harvest by February 15, 2009. If they failed to report by this deadline, any applications the hunter submitted for draw hunts for the 2009-2010 season would be rejected. This same requirement applied to any hunters desiring to obtain private land-only permits. To remain eligible, hunters were provided an extended deadline of April 8, 2009 (application deadline) to submit their harvest information; however, they were required to submit an \$8.00 late fee along with their report.

Hunter-harvest survey information was collected in two manners. First, the hunter could call a toll free number (1.888.248.6866) after January 5, 2009 and provide their harvest information to a live operator or use an online website ([www.newmexico-hunt.com](http://www.newmexico-hunt.com)) after September 1, 2008 to report their harvest. The hunter was required to provide basic information as to whether the hunter hunted and/or harvested a deer. Each hunter was also asked to rate their hunting experience. In order to match the license/permit data base, the hunter had to also provide his/her name, date of birth, and last four numbers of their social security number. A confirmation number was provided to the hunter at the conclusion of the survey as validation of filing their report.

To hunt deer in New Mexico during the 2008-2009 season, a hunter must have obtained either a public land deer draw permit issued through the regular public draw or web-based sale of leftover public draw permits or a private land-only permit issued from a license vendor. In addition, the hunter must have purchased a license valid for hunting deer. The public draw permit authorized the hunter to hunt on any open public land in the Game Management Unit (Unit) for which the permit was valid as well as any private land in that same Unit where the hunter possessed written permission by the landowner. The permit was valid only during the established hunt period and with the sporting arms type associated with the hunt code. The private land-only permit was valid only on private deeded acres within the Unit and only for the hunt period and sporting arms type associated with the hunt code. The private land-only hunter must have possessed written permission from each landowner whose property the hunter hunted in the Unit. Private land hunting in a few selected Units in the Northwest Area was also only provided through the public draw.

### **PREPARING THE REPORT**

**Data Quality:** All hunter information associated with permits issued through the draw and web-based sale was sufficient for analyses. However, of the 7,210 private land-only permits issued through vendors,

319 were unusable (incomplete or incorrect data). Included with the usable permits were 80 permits issued to invalid hunt codes i.e., hunt codes where private land hunting is awarded only through the draw (selected Northwest Area Units) or hunt codes reserved for public hunting on Wildlife Management Areas. These permit numbers are listed in Table 13 (shaded Units) with their associated hunt code.

There were 131 instances where the number of returns received for a hunt code exceeded the number of permits reported issued for that hunt code. This occurred specifically with the private land-only permits and is likely the result of the incomplete and/or inaccurate data provided on many of the permits. As a result, 131 permits were added into the permits issued column of Table 13 to balance the number of permits issued with the number of returns. The assumption was made that hunters reported accurately to the hunt code for which they hunted although the hunt code written on the permit may have been faulty. Specific hunt codes where this insertion occurred are highlighted in Table 13. Because of these relatively few instances, no significant difference to the overall estimates was assumed.

As a result, 268 private land-only permits (80 with invalid hunt codes as well as the remaining 188 with unusable data) are listed as 'Unknowns' and included at the end of Table 2. Estimates for hunter numbers and harvest for 'Unknowns' were made by applying the overall private land-only participation rate (0.5813) and success rate (0.5025) calculated from the usable permit data. These estimates are also provided in Table 2.

**Data Analysis and Reporting:** Data were compiled from three sources that included the Reporting Program database which contained all survey returns as well as the Vendor License Sales (VLS) database where all private land-only permits issued were reported and ORACLE where all draw and web-based sale permits information reside. Only data from each of these three sources that had complete information were used in the primary analyses. As described before, some VLS data were incomplete and/or inaccurate and therefore not used. Most anomalous data were lumped together and reported as 'Unknowns' with the exception of the 131 private land-only permits inserted into Table 13 to balance permits with returns.

Estimates provided in this report were dependant upon number of permitted hunters within each category, number of survey respondents within each category and the values reported from survey responses. For the specific characteristic of interest (hunters or harvest), the formula used to make the estimate was as follows:

$$((\text{Number of Permits} \div \text{Number of Responses})) \times (\text{Reported Characteristic of Interest})$$

A range of values can be used by establishing the reported value as the 'minimum' and the estimated value as the 'maximum'. No other statistical methods were used and no confidence intervals were provided.

Finally, Tables 1-13 that accompany this summary present information in similar format. All tables provide number of permits issued, total returns, response rates, reported number of hunters and harvest, hunter success rates, and estimated number of hunters and harvest. Hunter satisfaction data are also presented in Tables 1-5.

Each table presents data from a unique prospective depending upon the interest(s) of any particular reader. Due to the variety of ways the information is presented and compared, rounding differences

often lead to slightly different totals among tables. As a result, when reporting and describing total values used in this report, the author has chosen to reference the most complete summary information available as presented in Table 2.

## REPORT SUMMARIES

**Permits Issued:** A total of 41,410 permits were issued to hunt deer in New Mexico during the 2008-2009 season. A total of 34,196 permits (82.6%) were issued through the public draw and subsequent web-based sale of leftover permits (an increase of 187 permits from 2007-2008) while 7,210 (17.4%) were private land-only permits issued through vendors including Department offices and online (a 23.3% increase of 1,363 permits from 2007-2008). Seventy-five (75) of the private land-only permits were issued as part of the Private Land Deer Conservation Incentive Program. Another four permits were issued pursuant to the Lieutenant Governor's Deer Enhancement Program (two permits) and the Big Game Enhancement Program (two permits—new this season).

Of the 41,063 usable permits issued through the draw, web-based sale, and private land-only permits (this value does not include enhancement or incentive permits and excludes unknowns and private land-only permits issued with invalid hunt codes), 27,620 permits (67.3%) were issued to center-fire rifle hunters, 7,605 permits (18.5%) were issued to bow hunters, and 5,838 permits (14.2%) were issued to muzzle-loader hunters (Table 8).

**Response Rates:** The overall response rate for this third year of the Reporting Program was 81.2%. This is the highest response rate experienced do date and is substantially higher than 2005-2006, the final year of a voluntary reporting system, when the response rate was 17.8%. The 2008-2009 season exceeded the targeted response rate of 80% established prior to implementation of the Reporting Program.

Public land permit hunters responded at a much higher rate (86.1%) than did private land hunters (62.2%; Table 11). Muzzle-loader hunters responded at the highest rate (88.9%; Table 5) followed closely by bow hunters (86.9%; Table 4) with center-fire rifle hunters responding at the lowest rate (78.8%; Table 3). Response rates for each sporting arm type were higher than in 2007-2008.

**Harvest:** A total of 9,637 deer were reported harvested in the 2008-2009 season. This represents the reported harvest from all permitted hunters who either obtained public draw, private land-only, incentive, or enhancement permits (Table 2). Estimated harvest was 11,948 (Table 2) which includes the estimated harvest for the 'Unknown' category (78 deer). This represents a decrease of 9.3% from the estimated harvest in 2007-2008 of 13,178.

Hunters using center-fire rifles accounted for 73.4% of the harvest while 14.0% of the harvest was taken by bow hunters and 12.6% by muzzle-loader hunters (Table 8). Hunters obtaining permits to hunt on public land through the draw harvested 76.1% of the deer while hunters holding private land permits harvested 23.9%.

**Hunter Numbers:** A total of 28,708 respondents reported they hunted in 2008-2009 (Table 2). The estimated total number of hunters was 35,517 (4.5% increase from 2007-2008) and represents 85.8% utilization (a slight increase from 2007-2008). Approximately 67.3% of reporting hunters used center-fire rifles while 18.5% used bow and 14.2% used muzzleloaders (Table 8). Nearly 72.1% of those who

drew a permit to hunt on public land reported they hunted while only 59.2% of those who obtained permits to hunt on private land reported hunting.

**Hunter Success:** Overall hunter success rate (reported harvest ÷ reported number of hunters), was 33.6% (down substantially from 38.8% in 2007-2008). Success rates for individual sporting arms types were; 37.2% for center-fire rifle, 25.1% for bow and 27.7% for muzzle-loaders (Table 8). Hunter success rates for each sporting arm type were lower than in 2007-2008. Hunters with private land permits fared better with a 50.3% success rate than hunters issued permits to hunt on public land with a 30.3% success rate (Table 11).

**White-tailed Deer Summary:** A separate Coues White-tailed Deer bag limit has been established in three Southwest Area Units (23, 24, and 27). For the 2008-2009 season, 744 permits were issued. Four hundred twenty-seven (427) hunters reported a harvest of 77 deer with an overall success rate of 18.0%. This represents a decrease from the 2007-2008 season when the success rate was 25.0%. Estimated number of hunters was 509 while estimated harvest of Coues White-tailed deer in these three Units was 92 (Table 6).

The 2008-2009 season was the second season where Texas White-tailed deer only hunts were established in the Northeast Area (Units 41, 42, 54, 55, 57 and 58). A total of 126 permits were issued. Seventy-three (73) hunters reported a harvest of 30 deer (41.1% success rate). From these reported figures, an estimated 110 hunters harvested 45 deer (Table 7).

**Youth-only Summary:** A total of 883 permits were issued for youth-only hunts in 2008-2009 (an 18.5% increase from 2007-2008). Distribution of these youth-only permits was 677 rifle, 71 bow and 135 muzzle-loader. A reported 690 hunters harvested 345 deer with an overall success rate of 50.0%. Estimated values for youth-only hunts were 774 hunters and 387 deer (Table 9).

**Mobility Impaired Summary:** The 2008-2009 season was the second season where deer hunts were established for Mobility Impaired hunters. A total of 157 permits were issued with 112 hunters reported harvesting 47 deer for an overall success rate of 42.0% (up from 32.1% in 2007-2008). Estimated values for Mobility Impaired hunts were 127 hunters harvesting 53 deer (Table 10).

**Hunter Satisfaction:** The 2008-2009 season was also the second season that hunter satisfaction data for deer hunting was compiled and summarized. When reporting hunting effort, hunters were asked to rate their hunting experience on a scale of 1 to 5 with 5 being the highest score. The average rating for all Units across all sporting arms types was 3.3 (range 2.6 – 4.6; Table 2). This represents a decrease from the average rating of 3.5 in 2007-2008. Average ratings for rifle and bow were each 3.4 while, for muzzle-loaders, the average rating was 3.2 (Tables 3-5). Ratings for specific hunt codes and Units are provided in Table 1.

**New Mexico Deer Hunting Trends:** With the Reporting Program in its third year, only minor inferences can be made comparing trends of hunter numbers, harvest, and success rates with prior years. The following discussions are based upon information presented in Figure 1 which compares the 2008-2009 hunting season with the previous four years.

Estimated numbers of hunters indicate a relatively stable yet slightly declining trend over the five years. The 2008-2009 season estimate of 35,517 hunters was 4.5% higher than prior year, however is 2.3% below the 5-year running average of 36,366 hunters (min—33,997; max—40,325).

The 2008-2009 harvest estimate of 11,948 was 9.3% lower than the previous year yet 15.9% higher than the 5-year running average of 10,311 (min—7,184; max—13,178). The 5-year harvest trend is slightly increasing.

The 2008-2009 hunter success rate was 33.6% representing a 5% decrease from prior year. However, hunter success has seen an overall increase over the five years peaking last season at 38.8%. The 2008-2009 hunter success rate remains higher than the 5-year running average of 28.4% (min—17.8%; max—38.8%).

Hunter success rate experienced a decline immediately after implementation of the Reporting Program in 2006-2007. This was somewhat expected based upon the assumption there was some bias in the volunteer survey in that successful hunters were more likely to respond than unsuccessful hunters ('happy hunter' bias). With the mandatory reporting requirement, more unsuccessful hunters would report thereby reducing hunter success rate. Although this was indeed observed in 2006-2007, since then hunter success rates have seen an increase and are higher than immediately prior to the Reporting Program.

Estimated parameters for hunter numbers and harvest saw less dramatic shifts since implementation of the Reporting Program. As a consequence, at this time, there is no reason to believe that estimates generated from volunteer reporting prior to 2006-2007 are not reliable. Again, two to three more years of harvest data should provide for more useful evaluations of trends.

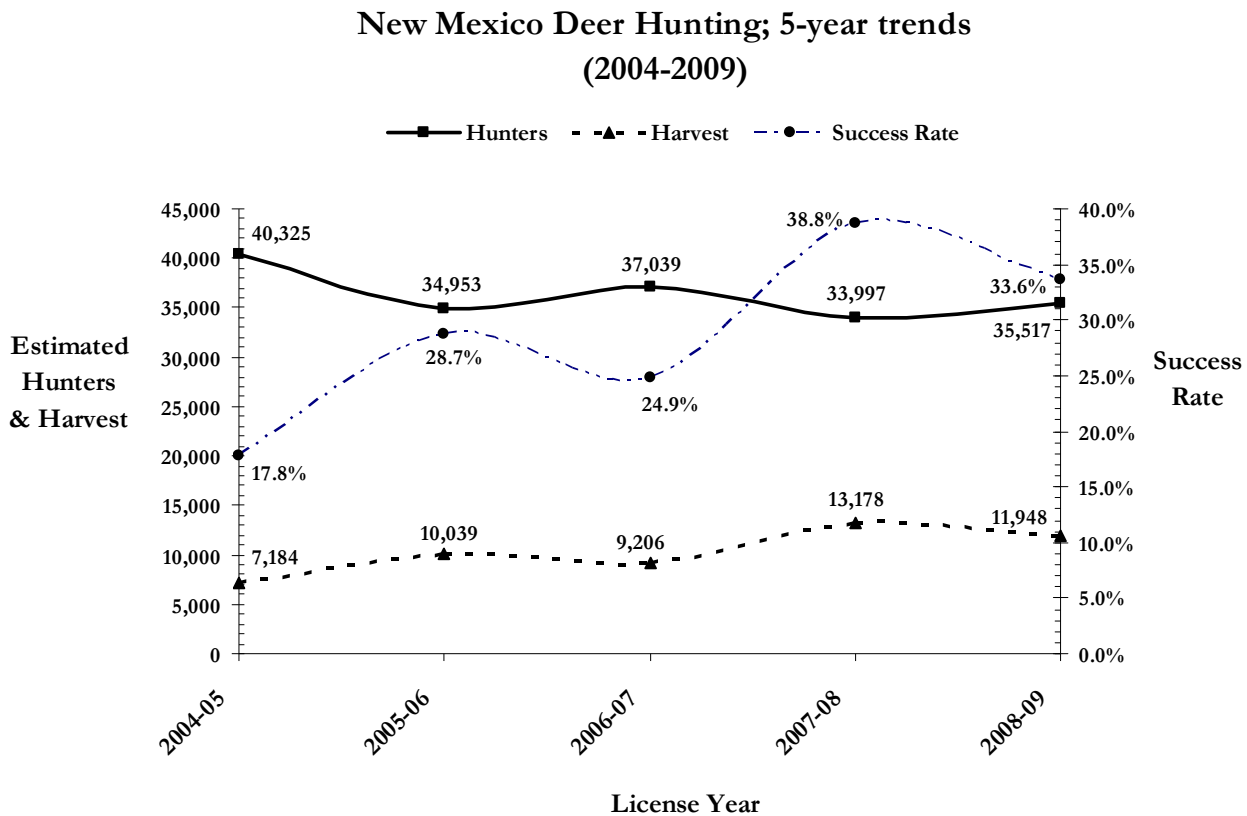

Figure 1. New Mexico Deer Hunting Trends; NMDGF.

## LIST OF TABLES

- Table 1: 2008-2009 New Mexico Deer Harvest Report—Hunt Code Summary (Total Draw and Private Land-Only Permits)
